# About Zearn

Zearn is the 501(c)(3) nonprofit educational organization behind Zearn Math, the top-rated math learning platform used by 1 in 4 elementary-school students and by more than 1 million middle-school students nationwide. Zearn Math supports teachers with research-backed curriculum and digital lessons proven to double student academic growth across all levels of student proficiency. Zearn Math can be used flexibly to support a range of instructional needs including Tier 1 and 2 support, acceleration, intervention, tutoring, after school programming and summer programming.

## Zearn Math is aligned to Iowa's Academic Standards for Mathematics.

We are committed to ensuring that our high-quality instructional materials align to Iowa's Academic Standards for Mathematics to fully support Iowa's students and teachers. The tables on the following pages, organized by Iowa Academic Standards, identify the alignment between each grade-level standard and Zearn Math lesson(s).

| <b>1.G.A.1</b>                                                           | Distinguish between defining attributes (for example, triangles are closed and three-sided) versus non-defining attributes (for example, color, orientation, overall size); build and draw shapes to possess defining attributes.                                                                                                              | Mission 5, Topic A, Lesson 1-3                                  |
| <b>1.G.A.2</b>                                                           | Compose two-dimensional shapes (rectangles, squares, trapezoids, triangles, half-circles, and quarter-circles) or three-dimensional shapes (cubes, rectangular prisms, cones and cylinders) to create a composite shape, and compose new shapes from the composite shape. Students do not need to learn formal names for these shapes.         | Mission 5, Topic B, Lesson 4-6                                  |
| <b>1.G.A.3</b>                                                           | Partition circles and rectangles into two and four equal shares, describe the shares using the words halves, fourths, and quarters, and use the phrases half of, fourth of, and quarter of. Describe the whole as two of, or four of the shares. Understand for these examples that decomposing into more equal shares creates smaller shares. | Mission 5, Topic C, Lesson 7-9<br>Mission 5, Topic D, Lesson 10 |

| 4th Grade Standards                      |                                                                                                                                                                                                                                                                                                                                                                                       | Lessons                                                            |
|                                          | <p>"one-degree angle," and can be used to measure angles.</p> <p>b. An angle that turns through <math>n</math> one-degree angles is said to have an angle measure of <math>n^\circ</math>. <i>For example, an angle that turns through 45 one-degree angles has an angle measure of 45 degrees.</i></p>                                                                               |                                                                    |
| <b>4.MD.C.6</b>                          | Draw and measure angles in whole-number degrees ( $1-180^\circ$ ) using a protractor. Sketch angles of specified measure.                                                                                                                                                                                                                                                             | Mission 4, Topic B, Lesson 5-8                                     |
| <b>4.MD.C.7</b>                          | Recognize angle measure as additive. When an angle is decomposed into non-overlapping parts, the angle measure of the whole is the sum of the angle measures of the parts. Solve addition and subtraction problems to find unknown angles on a diagram in real world and mathematical problems. <i>For example, by using an equation with a symbol for the unknown angle measure.</i> | Mission 4, Topic C, Lesson 9-11                                    |
| <b>Geometry</b>                          |                                                                                                                                                                                                                                                                                                                                                                                       |                                                                    |
| <b>4.G.A.1</b>                           | Draw points, lines, line segments, rays, angles (acute, right, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures.                                                                                                                                                                                                                              | Mission 4, Topic A, Lesson 1-4<br>Mission 4, Topic D, Lesson 13-15 |
| <b>4.G.A.2</b>                           | Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. Recognize right triangles as a category and identify right triangles.                                                                                                                                                 | Mission 4, Topic D, Lesson 13-15                                   |
| <b>4.G.A.3</b>                           | Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts. Identify line-symmetric figures and draw lines of symmetry                                                                                                                                                               | Mission 4, Topic D, Lesson 12                                      |

| <b>6.EE.A.2</b>                          | <p>Write, read, and evaluate expressions in which letters stand for numbers.</p> <p>A. Write expressions that record operations with numbers and with letters standing for numbers. <i>For example, express the calculation "Subtract <math>y</math> from 5" as <math>5 - y</math>.</i></p> <p>B. Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity. <i>For example, describe the expression <math>2(8 + 7)</math> as a product of two factors; view <math>(8 + 7)</math> as both a single entity and a sum of two terms.</i></p> <p>C. Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real-world problems. Perform arithmetic operations, including those involving whole-number exponents, in the conventional order when there are no parentheses to specify a particular order (Order of Operations). <i>For example, use the formulas <math>V = 3</math> and <math>A = 6s^2</math> to find the volume</i></p> | <p>Mission 6, Topic B, Lesson 10-11</p> <p>Mission 1, Topic B, Lesson 5</p> <p>Mission 1, Topic C, Lesson 9</p> <p>Mission 1, Topic F, Lesson 18</p> <p>Mission 6, Topic B, Lesson 6</p> <p>Mission 6, Topic C, Lesson 14-15</p> |

|                                          | <p>equations and inequalities to solve problems by reasoning about the quantities.</p> <p>a. Solve word problems leading to equations of the form <math>p + q = r</math> and <math>p(x + q) = r</math>, where <math>p</math>, <math>q</math>, and <math>r</math> are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach. <i>For example, the perimeter of a rectangle is 54 cm. Its length is 6 cm. What is its width?</i></p> <p>b. Solve word problems leading to inequalities of the form <math>p + q &gt; r</math> or <math>p + q &lt; r</math>, where <math>p</math>, <math>q</math>, and <math>r</math> are specific rational numbers. Graph the solution set of the inequality and interpret it in the context of the problem. <i>For example, as a salesperson, you are paid \$50 per week plus \$3 per sale. This week you want your pay to be at least \$100. Write an inequality for the number of sales you need to make and describe the solutions. <math>p + q &gt; r</math></i></p> | <p>Mission 6, Topic B, Lesson 7-12</p> <p>Mission 6, Topic C, Lesson 13-17</p> <p>Mission 7, Topic A, Lesson 5</p> <p>Mission 9, Topic A, Lesson 3</p> <p>Mission 9, Topic B, Lesson 7</p>                                                                                                              |
| Geometry                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                         |
| <b>7.G.A.1</b>                           | Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Mission 1, Topic A, Lesson 1-6</p> <p>Mission 1, Topic B, Lesson 7-12</p> <p>Mission 1, Topic C, Lesson 13</p> <p>Mission 2, Topic A, Lesson 1</p> <p>Mission 3, Topic B, Lesson 6</p> <p>Mission 3, Topic C, Lesson 11</p> <p>Mission 9, Topic A, Lesson 4</p> <p>Mission 9, Topic C, Lesson 13</p> |
| <b>7.G.A.2</b>                           | Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Mission 3, Topic A, Lesson 2</p> <p>Mission 7, Topic B, Lesson 6-10</p> <p>Mission 7, Topic D, Lesson 17</p>                                                                                                                                                                                         |
