

Scheduling Zearn in Your Day

WHEN	TIMING			CONSIDERATIONS
In the math block				
	60min	75min	90min	All Zearn digital lessons include daily fluency activities. Given this, you might prioritize the skills and concepts your students need most. Oral and low-prep routines may also help maximize your time. Zearn digital lessons incorporate multiple opportunities for both guided and independent practice, aligned to what students would do in problem sets or practice worksheets. Students will likely not need to engage with both Zearn’s digital lesson and additional problem sets.
Fluency	5min	5min	5min	
Introductory problem	10min	10min	10min	
Concept development	20min	30min	35min	
Small group instruction and Independent learning	20min	25min	30min	
Debrief	5min	5min	10min	
Outside the math block				
Additional instructional time (e.g. intervention, WIN, tutoring, acceleration, etc.)	30min (daily)			During this time outside the math block, students continue engaging in unit-aligned, grade-level lessons on Zearn. These lessons provide in-the-moment support on foundational content, right when a student struggles. You don’t need to put students on below-grade-level content, as they will receive the support they need right within their grade level work.
Outside the school day				
After-school/Tutoring	30min (3-5 times a week)			Students in after-school or tutoring programs use Zearn just like they would if it were outside the math block. They continue working on grade-level Zearn lessons, which contain adaptive support on foundational content. When using Zearn as homework, ensure all students have equitable access to devices and internet.
Homework	20min (daily)
